

GRP catch basin with steel grating

for small drums and bidons

Art.-No. 954053

Description

GRP is a universally applicable material for the storage of environmentally hazardous substances. The thermoset base structure in combination with the glass fiber reinforcement result in good fire behavior and high chemical resistance.

GRP sumps combine the properties of steel and plastic. Due to the absolute corrosion resistance, GRP collection trays may be placed directly on the floor. The low construction height simplifies handling in the plants.

Technical data

- for small drums and bidons
- Collecting volume up to 150 l
- external dimensions 120x80x19 cm (LxWxH)
- color grey
- load weight 250 kg
- with grating

The information in this technical data sheet is based on general knowledge and possible applications. Strub + Co. AG is not liable for damage resulting from improper use of the products. The measurement and production tolerances customary in the industry apply to the characteristic data given. In general, no legal binding force can be derived from these data. Our products are subject to continuous further development. Therefore, Strub + Co. AG reserves the right to change all technical data in this data sheet at any time and without prior notice.
