

# Pump system AdBlue

Dispensing unit for refueling with AdBlue from the IBC tank

**Art.-No. 954063 mit DLZ**

**Art.-No. 954062 ohne DLZ**

---

## Description

The pump system is the world's best-known portable dispensing unit specifically for AdBlue® for IBC tanks. The unit is suitable for all working conditions, robust, reliable and safe in the long term. Pump system AdBlue is robust and ergonomically designed. The frame is made of a high quality engineering plastic; this is shock resistant and protects the pump and all elements belonging to the system. The thick and knurled handle guarantees ergonomics and flexibility.

The structure also has a mechanical locking device for IBC tanks, so that the dispensing unit can be tightened to the tank and you can work safely, as well as a groove for convenient winding of the delivery hose. Their product features and the materials used make these guns extremely lightweight, ergonomic and robust: in fact, they can be used even in harsh conditions when exposed to shocks, impacts and stresses.

The body, lever, spout and settling system have the typical robustness of a professional system.

## Technical data

- Reliable even in less than ideal situations
- Guaranteed dispensing readiness at all times
- Always clean AdBlue
- Suitable for all operating conditions and applications
- Ergonomic mounting for IBC tanks
- Numerous configuration options
- Volume flow: up to 35 l / min
- Voltage: AC/DC
- Delivery hose: 6m
- Operating cycle: 2 0 min
