# STRUB Spindelfluid XLI+ Concentrate

Anti-corrosion fluid for spindle cooling systems

Art.-No. 31379

### Description

STRUB Spindle Fluid XLI+ Concentrate is a corrosion protection fluid for spindle and all other cooling systems. Biostatic therefore bacteria-resistant fully synthetic fluid with long-term corrosion protection on all metals incl. aluminium-iron-copper-zinc and solder alloys.

#### Application

Before initial filling with STRUB Spindlefluid XLI+ Concentrate, we recommend cleaning the system with beforehand using a mixture of 2% by volume of STRUB Spindle Fluid XLI + in water and system cleaner (Concentration used depending on the contamination, see PDS system cleaner) perform. Allow to circulate for at least 2 hours, drain the system completely and refill with 7 vol/% up to 10 vol/% Spindle Fluid XLI+ Concentrate. Check the concentration using a refractometer.

Before changing the STRUB Spindle Fluid XLI+ Concentrate, which is usually done annually, we recommend adding a system cleaner beforehand (concentration used depending on the contamination, see PDS system cleaner). Leave this for 24 hours, then drain the system completely, rinse and refill the system with 7 vol/% up to 10 vol/% STRUB Spindle Fluid XLI+ Concentrate.

For the preparation of STRUB Spindle Fluid XLI+ Concentrate only tap/drinking water may be used which does not exceed the following limits.

Water hardness 20°dH, chloride 100 ppm, sulfate 100 ppm.

The concentration should be checked periodically by refractometer (%Brix). Refractometer reading x 2.8 = vol/% effective concentration.

#### Features and advantages

- Prevents electrochemical corrosion
- Protects, among other things, against copper washout (complex formation) in the spindle cooling system
- Excellent cavitation protection
- Very efficient heat dissipation
- Low maintenance

ISO 9001|14001, Version 4: 14.04.2022 / DF

Recommendation 7 vol/% up to 10 vol/% in tap water

#### **Technical data**

Concentrate:		
Appearance	visual	Fluorescent / clear
Density at 20°C	g/cm <sup>3</sup>	1.06
pH value	-	9.2
Spindle fluid:		
Appearance	visual	Fluorescent / transparent
pH-value 5%y		8.9
Corrosion test DIN 51360/2 (7%)	Corrosion degree	0/4
Refractometer factor	% / °Brix	2.8 (multiply)

The information in this technical data sheet is based on general knowledge and application possibilities. STRUB + Co. AG is not liable for damage resulting from improper use of the products. The industry-standard measurement and production tolerances apply to the specified characteristic. Generally, no legal binding can be derived from these data. Our products are subject to continuous further development. Therefore, STRUB + Co. AG reserves the right to change all technical data in this data sheet at any time and without prior notice.

## Storage

Do not store STRUB Spindlefluid XLI+ Concentrate below 5 and not above 40°C. Do not expose container to direct sunlight.

Transport

ADR/SDR No dangerous goods

Disposal

LVA VeVA / EAK Concentrate 12 01 07

Emulsion 12 01 09
